It appear r is closely associated with, the erythrocyte receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      R;Sewell, W.A.; Brown, M.H.; Dunne, J.; Owen, M.J.; Crumpton, M.J.

This clone is available from RZPD,

Contact RZPD (customer.service@rzpd.de) for further information.

This CDS clone is part of a collection of human full ORF clones
jointly established and verified by the Harvard Institute of

Proteomics (HIP) and RZPD.

This CDS has been cloned without stopcodon.

The CDS has been cloned without stopcodon.

The CDS has been inserted into pDONR201 via a BP Clonase(TM)

reaction. Additional sequence has been added in front of the start
codon: att. AAAAAA GCA GCA CAC (ATC).

The last codon is followed by the 3' att site: GACCCAGCTTTCT. att

The clone is validated by full sequence check.

Compared to the reference sequence NM 003874 (GI:4502686) we found

AA exchange(8) at position (first base of changed triplet):

and SLAM associated protein (SAP) motifs. CD2000 DNA and protein is useful for treating disorder such as immune proliferative disorders, immune disorders (e.g. carcinoma), viral infection, autolmmune disorders (e.g., arthritis, multiple scolerosis, Garave's disease, and Hashimoto's disease), T cell disorder (e.g. acquired immune deficiency syndrome (AIDS)), inflammatory disorders (e.g. crohn's disease and ulcerative (colitis), inflammatory disorders (e.g. theumatory syndrome orteoarthritis), apoptotic disorders (e.g. systemic lupus erythematosus, and psoriasis), apoptotic disorders (e.g. systemic lupus erythematosus, and insulin-dependent diabetes mellitus), cytocoxic disorders, septic shock, cronic obstructive pulmonary disease (e.g. emphysema), bronchitis, cachexia, jaundice, hepatic circulatory disorders, hepatitis, cirrhosis, acute myeloid leukaemia, haemophilia and anaemia. CD2000 DNA is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology), predictive medicine (e.g. chromosomal mapping, tissue typing, forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical thrappeutic and phramacogenomics), and in methods of treatment (e.g. therapeutic and prophylactic). The present sequence is human CD84 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

The invention relates to treating a subject having a condition that benefits from modulating the balance of regulatory T cell function call function.

CC chaive to effector T cell function, or vice versa, in a subject. The method involves administering an agent that modulates the expression or activity of a molecule selected from PTGER2 and TGFbetal, or Jagged-1, CG PRR-12, CD89, SCD89, serotonin R, BY55, serotonin R2C, GPR63, CC histamine R-H4, GPR58, EPO-R, PSG-1, PSG-3, PSG-6, PSG-9, DBE-4d, and PI-CG are useful for diagnosing, preventing or treatment occurs. The methods are useful for diagnosing, preventing or treating conditions call activity of call response to antigens associated with the condition, such as in an call response, an autoimmune disorder, a viral infection, a microbial infection, a parasitic infection a tumour. The present sequence represents a human leukocyte differentiation CD84 antigen, preferentially expressed in regulatory T cells.
                                                                                                                                                                                                                                                                                   Treating a condition that benefits from modulating regulatory or effector T cell function comprises administering an agent that modulates the expression or activity of a gene or polypeptide (e.g. PTGER2, TGFbetal,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                             The present invention relates to PRO proteins and their coding sequences.
The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polysaccharide antigen unresponsiveness, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, intermediate lymphoma, follicular lymphoma, intermediate lymphoma, follicular lymphoma, type II hypersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or ankylosing spondylitis. The PRO protein as responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual data and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarched of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic sarcoma, possibly via gene therapy or vaccine production. The nucleic fact sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              142 MASVNSTCNVTLTCSVEKEERAVTYNWSPLGEEGAVLQIFQIFQTPEDQELTYTCTAQNPVSN 201

The invention relates to a novel isolated nucleic acid and the PRO polypeptide encoded by it. A protein of the invention has antidiabletic, dermatological, antipsoriatic, antialiergic, antidabletic, dermatological, antipsoriatic, antialiergic, antidabletic, dermatological, antipsoriatic, antidabletic, dermatological, antipsoriatic, antidabletic, dermatological, be polypeptide, its of the invention may have a use in gene therapy. The PRO polypeptide, its of the invention may have a use in gene therapy. The PRO polypeptide, its of the invention may have a use in gene therapy. The PRO polypeptide, its of the invention may have a use in gene therapy. The PRO polypeptide, its of antidable is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, osteoarthritis, a spondyloarthropathy, systemic sclerosis, an idiopathic inflammatory myopathy, sjogram's syndrome, thromboorytopenial, thyroiditis, diabetes mellitus, immune-mediated area in changed in a changed in a central or peripheral nervous system, idiopathic demyelinating polymeuropathy, Guillain-Barre syndrome, content inflammatory demyelinating polymeuropathy, Guillain-Barre syndrome, inflammatory demyelinating polymeuropathy, Guillainry disease, infectious or autoimmune chronic active hepatitis, primary disease, infectious or autoimmune chronic active hepatitis, primary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, contact dermatitis, sclerosing cholangitis, chilaease, arthem multiforme, contact dermatitis, psoriasis, an allergic chisease, asthma, allergic rhintis, attoriaria, an immunologic disease, abullous skin disease, stehma, allergic rhintis, attoriaria, an immunologic disease, bullous, contact dermatitis, food cosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity, urricaria, an immunologic disease, graft rejection or graft-versus-host disease. The present sequence represents a PRO protein contact disease, graft rejection or contact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New PRO polypeptides and polynucleotides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 YERIHALGPNYNLVISDLRMEDAGDYKADINTQADPYTTTKRYNLQIYRRLGKPKITQSL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           23-MAY-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  22-AUG-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                22-AUG-1997
                                                                                                                                                                                                                                                                                                      23-MAY-1
     ö
acid molecule designated Gene 164 from the human cDNA clone HSAWF26 (deposited as clone ATCC 97903 and ATCC 209049). The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion proteins by linking to the gene to a human immunoglobulin protein as compared to the human protein only. The invention relates to protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (mucleic acid sequences: AAV59511-V59812; amino acid sequences AAAV314731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polymuclectides. Specific uses are described for each of the 186 polymuclectides, based on which tissues they are most highly expressed in (see AAV59511 for

The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 cDNA sequences also given in the specification, encoded by one of 309 cDNA sequences also given in the specification. The protein is used in a condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperpoliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, particular disorders e.g. corneal infection. The polypeptides e.g. also be used to aid wound the aling and epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotrais. The polypeptides can also be used as a food additive or preservative to carbohydrate, vitamins, minerals, cofactors and other nutritional carbohydrate, vitamins, minerals, cofactors and other nutritional components. The printed specification, but was obtained in electronic format format and directors.
                                                                                                                                                                                                                                                                                                                                                                                                                Ruben SM, Rosen CA, Fischer CL, Soppet DP, Carter KC;
